

ISTQB Advanced Level Certificate – Test Analyst

5 days training plus 1 day coaching and exam

The globally recognized entry-level qualification for all software testers
Recommended for everyone involved in software testing.

This course leads to the International Software Testing Qualification Board (ISTQB) Advanced Level Certificate for Test Analysts and follows the ISTQB Certified Tester Advance Level syllabus. The certificate is awarded by ISTQB to those who achieve an examination mark of 65% or above in a two hour multiple-choice examination consisting of 65 scenario-based questions.

This certificate forms part of the highest level qualifications currently available from ISTQB. The certification is roughly equivalent to the Practitioner Level offered by ISEB, however the ISTQB examinations have more of an international dimension and are more widely recognized outside of the UK.

Course objectives:

This course covers everything required by the ISTQB syllabus for Test Analysts, with the emphasis on helping delegates to remember, understand, apply and analyse information within a test analysis environment.

Recommended for:

The course covers the necessary topics and skills for people who wish to extend their abilities to test a wide variety of commercial and safety critical software systems.

Key points:

The topics covered in the ISTQB Advanced Level Certificate for Test Analysts are those which are considered to be essential knowledge for those people who wish to test complex systems of those systems that require a high level of quality such as mission or safety critical systems.

Everything that is required by the ISTQB syllabus is covered, including:

Basic Aspects of Software Testing:

Testing Processes:

- Test analysis and design
- Test implementation and execution
- Evaluating Exit Criteria and Reporting

Test Management:

- Risk-Management

Test Techniques:

- Specification based
- Structure based
- Defect and Experienced Based
- Static Analysis

Test of Software Characteristics

- Quality Attributes for Domain Testing
- Quality Attributes for Technical Testing

Reviews

Incident Management

Standards and Test Process Improvement

Test Tools and Automation

- Test Tool Concepts
- Test Tool Categories
- Keywords Driven Test Automation
- Performance Testing Tools

People Skills – Team Composition

- Communication

Each section includes practical team and individual exercises to reinforce the learning points covered for that section.

Prerequisites:

Candidates must already hold the ISEB/ISTQB Foundation Certificate in Software Testing.

Candidates must also have spent at least one year in a software testing role.

ISEB Examination:

The examination consists of 65 scenario based, multi-choice questions which are of varying levels of difficulty and attract from one to three marks for each question. It is necessary to achieve at least 65% to pass this exam.

The questions can be drawn from one or more sections of Advanced Test Analyst or the Foundation Level syllabuses

This 6-day course consists of five full days of training, including practical exercises. The final day is used as revision, exam coaching and exam day.

Follow Up Courses:

- Practical Test Analyst
- ISTQB Advanced Technical Test Analyst
