

# Managing an Agile Project: Driving Project Delivery with a Focus on Value

## 1 Day

Learn what it is really like to run an agile project

An interactive course with a focus on 'what works'

In this workshop we look at how agile project management differs from – or can coexist with – the linear approach inherent in Prince2 and similar methods, and which corporate governance often still demands. We apply real world experience and, via short and engaging interactive exercises, explore the role and develop the skills a project manager needs to deliver an agile project.

### Course Objectives:

At the end of the day delegates will be able to answer the following questions:

- What type of projects are good candidates for an agile approach?
- What is the role of a project manager on an agile project?
- What tools can I use to maintain control over an agile project?
- How different are the team dynamics on an agile project?
- How do I keep a handle on requirements and stay within budget?
- How can I estimate or plan the work we need to do when requirements are evolving?
- How do I measure progress? How do I report progress?
- How can I ensure quality?
- What common issues and risks will I need to be ready for?

### Recommended for:

Team roles on an agile project, Project Managers, Programme Managers, IT Directors, Software Development Managers, Software Managers

### Key points:

- What is agile? - including the evolution of Agile and its principles, as well as popular agile methodologies
- Where does agile work well?
- Project initiation—including agile planning and estimating, understanding the business case and prioritising functionality
- The project team
- Leadership—including managing vs. facilitating, communication and understanding team dynamics
- Understanding the quality needs—including how quality is defined, test driven development and testing strategies
- Governance—including what works on an

agile project, reporting and an agile project in a non-agile program

- Managing requirements
- Managing delivery—including planning and management of iterations, ensuring quality, and how and when to test
- Transitioning to agile—including common problems and preparing for change

### Examination:

No examination for this course.

### Course Fee

**£550.00 +VAT**

### Other courses:

We provide a wide range of other courses on agile, for a full list of our courses please see our [course schedule](#).
