

ONESHARE SERVICES

Modernising application development and delivery

It is time to rethink how you deliver applications. Building powerful and versatile applications is easier than ever thanks to powerful tools that directly tap into the cloud. Cloud technologies offer the ability to transform traditional test environments while paving the way for more modern development methodologies. The cloud brings new capabilities, more favourable cost structures and a more responsive platform to your application environment.

Introducing Sogeti's OneShare portal

Sogeti has combined the power of Azure, with access to on-demand tools and resources to create a highly unique portal, OneShare. Customers can load, test and manage their environments and users can copy and deploy test infrastructures or move applications into production in one click of a button. New environments can be fired up quickly, giving access to the latest test and development tools such as Visual Studio IDE and HP IT Management SaaS software.

Whether you require a traditional test environment, are moving to application lifecycle management or are considering a modern DevOps approach, by moving to the cloud you will be able to embrace new tools, practices and processes.

OneShare for Test

Improve the efficiency and performance of your test environment

OneShare for ALM

Bring app services together with tools and processes

OneShare for DevOps

Move from reactive to a predictable proactive approach

Full Cloud Transformation with Managed Services from Sogeti

Sogeti is a trusted partner who takes a holistic approach to your application portfolio. From the selection of applications, to their modernisation and management, Sogeti can help run all or part of your IT department in the Cloud.

Flexible provisioning and pay-as-you-use pricing

The OneShare portal combines an infrastructure template library with virtual self-service functionality that means you can select the package of tools your virtual team requires. By pre-defining the environments used by team members it becomes easier to plan, prepare, specify and execute development work. And since services can be consumed by the hour rather than on a weekly or monthly basis, you really do pay only for what you use.

If you have Enterprise License Agreements already in place, we can accelerate the provisioning of your software on pay-per-use infrastructure, circumventing lengthy internal request processes. The ease at which the portal can be switched on and off in the cloud, suits flexible models where resource and project requirements fluctuate up and down. And Sogeti is always on hand to support customisation where a more complex set up is required.

Complete control and scalability

Using Visual Studio IDE in the cloud means that you can access different development environments for different project types, from anywhere, and create golden images and standardize the developer desktop for outsourced work. And with unlimited virtual machines access, scaling up environments is easy.

Together with Sogeti's professional services, we can help you to create an application development and test environment that's ideal for you, or support a much wider cloud transformation.

"We have been working closely with Sogeti to build custom services and solutions that allow customers to take full advantage of the value the cloud has to bring by extending the Azure platform."

Microsoft

PostNL

One of the largest companies at the forefront of full cloud transformation

Situation

PostNL is largely operating in a shrinking market

Letter and mail item volumes diminished by 11 percent, conversely huge increase in online shopping

Needed to transform their business to remain competitive, the cloud provided the answer

Solution

PostNL took the plunge in mid-2013 and started transferring all the IT systems that it could to the cloud.

With this decision this organisation is adopting a cloud based strategy that utilizes Azure as a baseline, taking it further than any other Dutch company of its size.

PostNL chose trusted partner Sogeti, with the initial task to switch 75 applications to a 'public cloud'.

Sogeti delivered and now manages that Azure based cloud exclusively for PostNL.

Sogeti and Microsoft

Sogeti is an industry leader in application development and lifecycle services and has won numerous Microsoft awards including Windows Azure SI Partner, Global Alliance Partner, and Enterprise Partner of the Year among others. By combining innovative Microsoft solutions with our service excellence, we're able to offer extensive proven experience and solutions like OneShare, which are enabling customers to realise the full potential of the cloud.

About Sogeti

Sogeti is a leading provider of local, professional technology services and a global Microsoft Alliance Partner. We specialise in Application, Infrastructure and Engineering Services, offering cutting-edge solutions around Application Development, Testing, Mobile, cloud, and BI and Analytics, combining world class methodologies and our global delivery model, Rightshore®. Sogeti brings together more than 20,000 professionals in 15 countries and has a strong local presence in over 100 locations in Europe, USA and India. Sogeti is a wholly-owned subsidiary of Cap Gemini S.A., listed on the Paris Stock Exchange.
